

BHAVIK GAUR

AI Platform Engineer | Data Engineer | Data Scientist

Dubai, UAE | +971 544357281 | Bhavikgaur826@gmail.com | linkedin.com/in/bhavik-gaur-20ab09165

PROFILE

Data Engineer with 4+ years of experience building scalable cloud data solutions, ETL pipelines, and data platforms using Azure Databricks, PySpark, Delta Lake, and ADLS Gen2. Experienced in data modernization, migration, and lakehouse architecture. With hands-on experience in developing Generative AI solutions using Azure AI Foundry, Azure OpenAI, and Azure AI Search. Skilled in building RAG pipelines, document processing workflows, embedding generation, semantic search, and integrating AI applications with enterprise systems using APIs, microservices, Azure Entra ID, and RBAC.

KEY SKILLS

- **Visualization:** Power BI, Matplotlib
- **Programming:** Python, SQL, PySpark
- **Machine Learning:** Modeling, Feature Engineering, Azure AI Foundry, Azure OpenAI Service
- **Big Data:** Apache Spark, Delta Lake, ETL Pipelines
- **Cloud:** Azure Databricks, ADLS Gen2, Blob Storage
- **Tools:** Prefect, GitHub, Control-M, Oracle, Power Automate

RELEVANT EXPERIENCE

AI Engineer — Amphora Software

1st Feb 2026 – Present

- Designed and implemented an AI-powered Technical Virtual Assistant for the Commodity Trading platform using Azure AI Foundry, Azure OpenAI (GPT-4o), and Azure AI Search to deliver context-aware technical support from enterprise knowledge sources.
- Developed an end-to-end Retrieval-Augmented Generation (RAG) pipeline by ingesting product documentation, troubleshooting guides, release notes, and knowledge base articles, performing document chunking, vector embedding generation, semantic indexing, and context retrieval.
- Integrated Azure AI Search with Azure OpenAI to perform semantic document retrieval and grounded response generation, significantly improving the relevance and accuracy of troubleshooting responses.
- Secured AI services using Azure Entra ID authentication, implementing tenant-aware authorization and role-based access to support secure knowledge retrieval within a multi-tenant SaaS environment.
- Designed the AI solution to integrate with GraphQL-based microservices architecture, enabling future extensibility for enterprise AI agents while preserving existing business logic and security boundaries.
- Implemented function/tool calling to enable the LLM to interact with GraphQL APIs and enterprise services for executing business workflows.

Data Engineer — Tata Consultancy Services

Aug 2022 – Jan 2026

- Developed and Maintained modular ETL pipelines using Azure Databricks, PySpark and Delta lake, enabling faster analytics and cleaner data lake storage on ADLS Gen2.
- Implemented vector search pipelines using embedding models and vector databases to enable semantic search capabilities in AI applications.
- Spearhead the migration of 20+ data workflows from on-premises Oracle EDW to cloud (Azure), demonstrating flexibility with regards to next generation technology .
- Contributed to implementing a Medallion architecture enabling traceable and structured data evolution.
- Engaged with clients, ensuring timely project delivery and actively resolving challenges during the development phase.

PROJECTS

Inside Airbnb (Non-Profit Organization)

- Developed analytical dashboards and KPI reports to evaluate listing performance across multiple markets.
- Performed **exploratory data analysis** and business benchmarking to identify trends, pricing opportunities, and market performance indicators.
- Analyzed survey data and built dashboards to extract actionable insights for decision-making.

ADDITIONAL EXPERIENCE

AI Hackathon (48 Hours) — lablab.ai

- Developed AI solution under time constraints, demonstrating rapid prototyping and problem-solving in high-pressure environments typical of research labs.

EDUCATION

M.Sc. Data Science and Artificial Intelligence — Middlesex University, Dubai 2026–2027

Bachelor of Technology — ABES Institute of Technology 2016–2020 | 80%

LANGUAGES

English (Fluent), Hindi (Fluent)
